

Colours of finishing paints on metallic materials

Information within brackets ([...]) in this document refers to local regulations.

Scope

This standard is concerned with the colours of anti-corrosion finishing paints with the exception of e.g. micaceous iron and aluminium pigmented paints.

Changes since the previous edition

This edition differs from the previous in that:

- References have been checked and updated.
- In chapter 3 – “Colour samples”, it is clarified that Appendix 1 to this standard does not give an exact picture of the different SSG colours.
- In chapter 3 – “Colour samples”, we have removed the text about how a colour can be affected by the spectral composition of light and that you should therefore use paint from the same production batch when there are extra high demands on the colour. The text is removed because there are rarely such requirements.
- The standard’s design is updated according to the current template for SSG standards.
