Recommendations for maintenance painting (repainting) of metallic materials

Information within brackets (**[...]**) in this document refers to local regulations.

Scope

This standard is intended for use as a guide for maintenance painting (repainting) of metallic materials. For initial painting with blasting of constructs SSG 1005E – *Recommendation for initial painting of metallic materials* is to be applied.

Changes since the previous edition

This edition differs from the preceding in that:

- A verification has been made that references to other standards and guidelines are still relevant.
- The text has been worked through with the purpose of making it clearer.
- The appendices about control have been removed, since information about control can be found in SSG 1017E – *Recommendations for the inspection of painting*.
- The previous sections *Surface roughness* and *Cleaning* are merged into 3.1 – "Cleaning", which has led to new section numbers for the underlying sections.
- Special requirements for indoor objects in section 3 – "Requirements" have been removed.
- The standard has been updated according to the current template for SSG standards.
