Choice of paint system

Scope

The standard provides recommendations concerning paint systems for initial painting and maintenance painting on metallic materials, carbon steel and hot-dip galvanized steel in various environments. It also provides instructions on how to specify the designation that is to be included in order documentation.

The aim of the standard is to make it easier to choose the correct surface treatment for purchasers of painting work in the forestry industry or in any other industry with similar environments.

Changes since the previous edition

This edition differs from the previous mainly through the following:

- an addition has been made stating that paint systems with a higher dry film thickness then those tested may also be approved
- the number of paint systems has been reduced, to make choosing easier
- references to other standards have been checked to ensure relevance
- the appendices have been simplified and merged into one singular appendix
- the standard's template has been updated.

Contents

1 General requirements 2
2 Specific requirements 2
3 Maintenance painting 3
4 Designation to use for procurement 3
5 Description of paint systems 4
6 References 5
Appendix 1: Design guide and overview of paint systems
