Shaft seals – functional procurement

Scope

This standard is intended for application when procuring shaft seals. The purpose is to clarify requirements that are placed on the purchaser and the supplier in order to achieve reliable function. The standard is intended to assist purchasers and direct suppliers of seals and can be regarded as a support for handling spare parts or modifications.

The customer goes through the various parameters presented in the standard and specifies the desired sealing function. It is then up to the supplier to present the best solution with one or more types of seal. The supplier must also report the total cost for the seals' operating time.

Changes since the previous edition

This edition differs from the previous one in that:

— References have been updated.

— The standard has been language reviewed and adjustments have been made for better readability.
