

## Rollers Design, inspection and servicing

### Scope

This standard is designed to be used as data for suppliers and purchasers in respect of rollers. The standard deals with important aspects which must be taken into account in order to provide the best possible design and maintainability.

The standard looks at design criteria, surface protection treatment, cleaning options and inspectability, among other things.

Use of [SSG 3854E](#) - *Technical specification for rollers* is recommended as ordering data for new orders, servicing and replacements.

The standard must not be considered comprehensive for all types of roller.
