

## Lubrication systems – recommendations for selection and procurement

Information within brackets ([...]) in this document refers to local regulations.

### Scope

This standard is intended to serve as a guideline for the selection and procurement of lubrication systems. The intention is for the user to have a safe highly available lubrication system with low maintenance costs. This is to include consumption and circulation systems.

The purchaser's technical delivery conditions for tendering and procuring lubrication systems are set out in Appendix 1 – *Lubrication system – technical specifications*.

Variants or choice of lubricant are not covered in these instructions.

### Changes since the previous edition

This edition differs from the previous one in that:

- Major changes have been made. General descriptions of lubrication systems have been replaced with general function instructions. Furthermore, limits of responsibility and reconciliation points have been clarified.
- Appendix 1 – *Lubrication system – technical specifications* have been revised to be the customer's specification to the supplier regarding the technical conditions the plant has to offer.
- Appendix 2 – *Schematic diagram – lubrication system* has been added to visually describe an expected delivery of system documentation.

### Contents

<b>1</b>	<b>General regulations</b>	4
1.1	General	4
1.2	Procurement recommendations	4
1.3	Work environment/Environment	4
1.4	Safety	4
1.4.1	Sound levels	5
1.4.2	Maintenance	5
1.5	Scope of delivery	5
1.6	System design – general	5
1.6.1	Piping design	6
1.6.1.1	Pipes	6
1.6.1.2	Pipe connectors	7
1.6.1.3	Pipe clamping	7
1.6.1.4	Assembly	8
1.6.1.5	Hose assemblies	9
1.6.1.6	Assembly	9
