

Floor gulleys of untrapped type in concrete floors – principle design

Scope

This standard provides instructions for the principle design of untrapped gulleys for concrete floors in the industry.

The document is to be used as a basis for project planning, and the purpose is to provide the supplier and the constructor with information concerning conditions at an early stage so that the construction will be performed correctly.

Changes since the previous edition

This edition differs from the previous one in that:

- "Fig. 2" has been added, with an example of a large floor gully.
- The standard's title has been adjusted.
- The standard has been updated according to the current template for SSG standards.
