

Joints in concrete structures

Information within brackets ([...]) in this document refers to local regulations

Scope

This guide provides instructions for the construction of joints in concrete structures.

The guide can be used in project planning and procurement phases to inform all parties involves at an early stage about the conditions that exist, so that the construction will be performed correctly.

Changes since previous edition

This edition differs from the previous one in that:

- The document structure and the text has been simplified.
- References have been checked and updated.
